Key Projects

Portfolio Website
Hand-coded a responsive portfolio website using HTML and CSS (compiled from SCSS), focusing on semantic markup and using modular components.
kobbyasomani.github.io

Web Server API
Built with Flask, SQLAlchemy, and PostgreSQL. Allowed users to register an account, create posts for different locations and categories, and upvote other users' answers.
github.com/kobbyasomani/t2a2-web-api

React Hackathon
Created a React application in a team of three using data from the Metropolitan Museum of Art API. Created artwork thumbnail and details page components populated with API data.
